

DHRUV MAKWANA

Python Backend Developer · Fresher

✉ dhruvmakwana904@gmail.com | ☎ +91-9099432835 | 🌐 github.com/MakwanaDhruv11 | 🇮🇳 India
(Rajkot, Gujarat)

PROFESSIONAL SUMMARY

Motivated Python Backend Developer (Fresher) with strong fundamentals in Python programming, data structures, and basic database management. Experienced in building console-based applications using Python fundamentals, functions, and collections. Quick learner with a logical mindset and genuine passion for backend development — eager to apply programming skills in a real-world team environment and grow into advanced backend technologies.

TECHNICAL SKILLS

Languages: Python, C, C++	Tools: Git, GitHub, VS Code
Python Topics: Data Types, Conditions, Loops, Functions, Lists, Tuples, Sets, Dictionaries	Concepts: Problem Solving, Logic Building, Basic Backend Development
Database: DBMS Concepts, MySQL (Basic), SQL Queries	Languages Known: Gujarati, Hindi, Basic English

FEATURED PROJECTS

Student Management System — Python · Lists · Dictionaries · Functions · CRUD

Context: Console-based application to manage student records — built as a learning project to apply Python fundamentals end-to-end.

- Console-based application to manage student records using full CRUD operations (Create, Read, Update, Delete).
- Implemented using Python lists, dictionaries, loops and functions for clean, modular code structure.
- Menu-driven program for adding, viewing, updating and deleting student data — simulating a real-world data management workflow.
- GitHub: github.com/MakwanaDhruv11/student-management-system

Key Learning: End-to-end Python application development, data modelling with collections, and structured program design.

Mini Banking System — Python · Conditional Logic · Functions · User Input Handling

Context: Simple banking application to practice conditional logic and function-based program structure.

- Implemented core banking features: deposit, withdraw, and balance check — covering real-world transaction scenarios.
- Used conditional statements and user input handling for robust transaction processing and validation.
- Structured the entire program using functions for different banking operations — ensuring code reusability and clarity.
- GitHub: github.com/MakwanaDhruv11/python-banking-system

Key Learning: Function-based design patterns, input validation, and building user-interactive Python programs.

EDUCATION

Diploma in Computer Engineering	Currently Pursuing
---------------------------------	--------------------

STRENGTHS & SOFT SKILLS

- Logical thinking and analytical mindset — comfortable breaking complex problems into simple, structured solutions.
- Quick learner and adaptable — able to pick up new technologies, frameworks, and concepts with minimal guidance.
- Strong interest in backend development — continuously exploring Python libraries, database design, and API concepts.
- Continuous learning attitude — actively working on expanding skills in web frameworks (Flask/Django) and backend APIs.
- Strong communicator with ability to explain technical concepts clearly to both technical and non-technical audiences.

ACHIEVEMENTS & EXTRACURRICULARS

- Built 2 end-to-end Python console applications independently — demonstrating ability to take projects from idea to working software.
- Actively maintaining a GitHub profile with project repositories and clean code documentation.
- Currently preparing for Diploma in Computer Engineering semester examinations at Atmiya University.
- Exploring backend development topics beyond curriculum — including Flask, REST APIs, and database integration.
